

Basic Code Analysis: Categorizing System Incidents

Duration : 30 Min.

Scenario

Your team receives production support tickets. You must classify whether each failure is CODE, CONFIG, INFRA, or INTEGRATION.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Classify the three given tickets inside `'tickets_classification.json'`.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	<code>tickets_classification.json</code> exists and is valid JSON	3 Marks
TC2	Ticket 1 (DB timeout) classified correctly as INFRA/INTEGRATION	4 Marks
TC3	Ticket 2 (invalid DB credentials) classified as CONFIG	3 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
