

# Basic Code Analysis: Resolving Merge Conflicts

Duration : 30 Min.

## Scenario

You run a git merge command and encounter conflict markers inside 'server.js'. You must resolve conflict blocks and keep both updates.

## Task Objectives

Perform the following actions inside the student\_workspace directory: - Edit 'server.js' to remove git conflict headers (e.g. HEAD, ==, >>>) and align variables.

## Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press **Ctrl + S** (Windows) or **Cmd + S** (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

## Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

## Grading Criteria

Your performance will be evaluated based on the following test cases:

| Test Case | Requirement                                                | Marks   |
|-----------|------------------------------------------------------------|---------|
| TC1       | Conflict markers are fully removed from file               | 3 Marks |
| TC2       | Valid javascript syntax preserved                          | 4 Marks |
| TC3       | Both staging and production parameters merged successfully | 3 Marks |

**Total Score: 10 Marks**

## Important Notes

---

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
