

Basic Code Analysis: Complex Nested Stack Trace Diagnostics

Duration : 60 Min.

Scenario

A multithreaded transaction gateway fails under stress. Deeply examine the nested stack trace logs to find the root cause database exception.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Fill out 'root_cause_analysis.json' detailing the nested exception layer stack frames.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	root_cause_analysis.json exists and is valid JSON	5 Marks
TC2	Root exception correctly identified as SQLException	5 Marks
TC3	Deadlock error code (1205) correctly located in log trace	5 Marks

TC4	Class name of blocking query correctly mapped	5 Marks
-----	---	---------

Total Score: 20 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
