

NJS_Q02_E: Node.js Environment Configuration

Difficulty: EASY

Scenario

A Node.js web application is exhibiting runtime anomalies or configuration errors in production. You are tasked with writing clean, async, and correct JavaScript code to solve the requirements.

Username & Naming Conventions

- Resources must utilize your candidate suffix prefix (<username>-<exam_code>).

Task Objectives

- Node.js Optimization & Code Resolution:** Write a utility config.js that reads environment variables and outputs a validated JSON config metadata file.
- Ensure your changes pass all local verification tests.

Verification

- Local run test script run.py can be executed to verify local workspace properties.
- Central validation runs queries against the live workspace to verify integration.

Grading Criteria

- TC1: File config.js exists in workspace** (4 Marks)
- TC2: Execution creates config_report.json** (4 Marks)
- TC3: config_report.json contains valid JSON content** (4 Marks)
- TC4: Metadata matches environment configuration values** (4 Marks)
- TC5: Missing variables handles default values** (4 Marks)

Important Notes

- Always check that your syntax compiles without errors.
