

Basic Code Analysis: Repairing Maven Dependency Conflict Warnings

Duration : 45 Min.

Scenario

A Java application crashes at boot with a `NoSuchMethodError` due to duplicate Jackson core dependencies. Exclude duplicate library dependencies inside `pom.xml`.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Edit '`pom.xml`' to add exclusions under the conflicting dependency block.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	<code>pom.xml</code> contains valid XML	3 Marks
TC2	Conflicting jackson library correctly excluded	3 Marks
TC3	Correct exclusion schema syntax used	2 Marks
TC4	Main dependencies remain intact	2 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
