

Databricks Lab : Delta Table Autoloader Ingestion

Duration : 60 Min.

Scenario

Deploy an Auto Loader stream configuration to incrementally ingest cloud storage data.

Input Details

The environment has been pre-configured with the following resources: - **Workspace:** Pre-configured through KodeBuck Service credentials (DATABRICKS_HOST, DATABRICKS_TOKEN)

Username & Naming Conventions

Your candidate prefix is a combination of your username (the part of your email/login before the @ or _ symbol) and exam code. For example, if your username is student (or student_labskraft.com) and your exam code is exam123, your prefix is **student-exam123**.

You must name your resources accordingly:

- Delta Table:** <prefix>_autoloader_ingest (e.g. student_exam123_autoloader_ingest)

Task Objectives

1. Auto Loader Configuration

- Set up structured streaming with cloudFiles source.
- Ingest to <prefix>_autoloader_ingest Delta table.

Verification

Once you have performed the tasks, you can run the verification script to check your progress and receive your score. The verification system will check the actual resources in the environment.

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	Table load check	4 Marks
TC2	Auto Loader config check	4 Marks

TC3	Schema schemaLocation validation	4 Marks
TC4	Reserved validation	4 Marks
TC5	Reserved validation	4 Marks

Total Score: 20 Marks

Important Notes

- Ensure all resource names contain your candidate username prefix in lowercase.
- Check that your script compiles cleanly and contains no syntax errors.
