

Databricks Lab : Delta Lake Time Travel & Restore

Duration : 60 Min.

Scenario

Utilize Delta transaction log details to perform time travel queries and restore a table to a prior state.

Input Details

The environment has been pre-configured with the following resources: - **Workspace:** Pre-configured through KodeBuck Service credentials (DATABRICKS_HOST, DATABRICKS_TOKEN)

Username & Naming Conventions

Your candidate prefix is a combination of your username (the part of your email/login before the @ or _ symbol) and exam code. For example, if your username is student (or student_labskraft.com) and your exam code is exam123, your prefix is **student-exam123**.

You must name your resources accordingly:

- Delta Table:** <prefix>_time_travel (e.g. student_exam123_time_travel)

Task Objectives

1. Delta Time Travel

- Execute RESTORE query targeting version timestamps or indexes.

Verification

Once you have performed the tasks, you can run the verification script to check your progress and receive your score. The verification system will check the actual resources in the environment.

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	Version check validation	4 Marks
TC2	Restore query execution	4 Marks
TC3	Row count matching	4 Marks

TC4	Data consistency check	4 Marks
TC5	History logs presence	4 Marks

Total Score: 20 Marks

Important Notes

- Ensure all resource names contain your candidate username prefix in lowercase.
- Check that your script compiles cleanly and contains no syntax errors.
