

Databricks Lab : Unity Catalog Schema Permissions

Duration : 60 Min.

Scenario

You are tasked with setting up schema accessibility and assigning standard permissions within Unity Catalog for raw data ingress.

Input Details

The environment has been pre-configured with the following resources: - **Workspace:** Pre-configured through KodeBuck Service credentials (DATABRICKS_HOST, DATABRICKS_TOKEN)

Username & Naming Conventions

Your candidate prefix is a combination of your username (the part of your email/login before the @ or _ symbol) and exam code. For example, if your username is student (or student_labskraft.com) and your exam code is exam123, your prefix is **student-exam123**.

You must name your resources accordingly:

- Schema Name:** <prefix>_raw_data (e.g. student_exam123_raw_data)

Task Objectives

1. Schema Creation

- Create a schema named <prefix>_raw_data.
- Assign appropriate USAGE or SELECT privileges.

Verification

Once you have performed the tasks, you can run the verification script to check your progress and receive your score. The verification system will check the actual resources in the environment.

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	Schema existence (<prefix>_raw_data exists)	4 Marks

TC2	Privilege grant check	4 Marks
TC3	Catalog binding check	4 Marks
TC4	Reserved validation	4 Marks
TC5	Reserved validation	4 Marks

Total Score: 20 Marks

Important Notes

- Ensure all resource names contain your candidate username prefix in lowercase.
- Check that your script compiles cleanly and contains no syntax errors.
