

GenAI Ops: AI Safety Checklist & Grounding Score Calculator

Duration : 45 Min.

Scenario

Build a Python evaluation helper ('evaluate_safety.py') that checks an AI response against 6 evaluation dimensions and calculates a composite safety score.

Target File Location & Creation

File to Create/Update: student_workspace/evaluate_safety.py **Input Resource File to Inspect:** student_workspace/ai_incident_resolution.txt

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect ai_incident_resolution.txt in student_workspace/. - Create or update student_workspace/evaluate_safety.py and populate it with valid analysis results.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect ai_incident_resolution.txt inside student_workspace/.
3. Create or open student_workspace/evaluate_safety.py in student_workspace/ and record your answers.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	evaluate_safety.py is syntax-valid Python	3 Marks
TC2	Evaluates Accuracy, Grounding, Completeness, Format, Actionability, Safety	3 Marks

TC3	Calculates composite safety score out of 100	2 Marks
TC4	Outputs safety_score.json	2 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.

Important Notes
