

# NJS\_Q05\_E: Event Loop Latency Monitor

---

Difficulty: EASY

---

## Scenario

---

A Node.js web application is exhibiting runtime anomalies or configuration errors in production. You are tasked with writing clean, async, and correct JavaScript code to solve the requirements.

## Username & Naming Conventions

---

- Resources must utilize your candidate suffix prefix (<username>-<exam\_code>).

## Task Objectives

---

- Node.js Optimization & Code Resolution:** Implement an event loop lag tracking helper using perf\_hooks to alert on latency spikes.
- Ensure your changes pass all local verification tests.

## Verification

---

- Local run test script run.py can be executed to verify local workspace properties.
- Central validation runs queries against the live workspace to verify integration.

## Grading Criteria

---

- TC1: File monitor.js exists in workspace** (4 Marks)
- TC2: Module imports monitorEventLoopDelay from perf\_hooks** (4 Marks)
- TC3: Latency monitoring helper class or function implemented** (4 Marks)
- TC4: Lag threshold triggers custom alerts or logs** (4 Marks)
- TC5: Statistics reports 95th percentile metrics successfully** (4 Marks)

## Important Notes

---

- Always check that your syntax compiles without errors.
