

Databricks Lab : Failed Job Diagnostic & Repair

Duration : 60 Min.

Scenario

Diagnose failed runs and trigger the repair utility to retry only the failed tasks in a multi-task pipeline.

Input Details

The environment has been pre-configured with the following resources: - **Workspace:** Pre-configured through KodeBuck Service credentials (DATABRICKS_HOST, DATABRICKS_TOKEN)

Username & Naming Conventions

Your candidate prefix is a combination of your username (the part of your email/login before the @ or _ symbol) and exam code. For example, if your username is student (or student_labskraft.com) and your exam code is exam123, your prefix is **student-exam123**.

You must name your resources accordingly:

- Job Name:** <prefix>-repair-run (e.g. student-exam123-repair-run)

Task Objectives

1. Job Ingress Diagnosis

- Find the failed run id.
- Trigger repair and run retry validation.

Verification

Once you have performed the tasks, you can run the verification script to check your progress and receive your score. The verification system will check the actual resources in the environment.

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	RCA log generated	4 Marks
TC2	Repair trigger verification	4 Marks

TC3	Task retry logic check	4 Marks
TC4	Reserved validation	4 Marks
TC5	Reserved validation	4 Marks

Total Score: 20 Marks

Important Notes

- Ensure all resource names contain your candidate username prefix in lowercase.
- Check that your script compiles cleanly and contains no syntax errors.
