

Incident Management Lab: End-to-End P2/P1 Major Incident Workflow Simulation

Duration : 90 Min.

Scenario

A core microservice deployment causes widespread transaction failures. You must execute a complete major incident workflow from detection to closure.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Execute ticket creation, priority classification, bridge management, stakeholder communications, PIR report, and problem record creation.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press **Ctrl + S** (Windows) or **Cmd + S** (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Detecting service failure, creating an incident ticket, and classifying P1 priority: 3 marks
2. Assembling and leading a Major Incident Bridge with SMEs and bridge scribes: 3 marks
3. Publishing timely stakeholder broadcasts for Operations and Business leaders: 3 marks
4. Implementing emergency workaround fixes and verifying service restoration: 3 marks
5. Facilitating a Post Incident Review (PIR) and publishing a formal PIR report: 2 marks
6. Raising a linked Problem Record to track permanent engineering fixes: 2 marks
7. Documenting blameless postmortem findings and SMART action items: 2 marks
8. Performing final quality review and closing the incident record cleanly: 2 marks

Total Score: 20 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
