

.NET Lab: Middleware Response Compression Configuration

Duration : 25 Min.

Scenario

To optimize network transfer payloads, the development team wants to configure Response Compression middleware settings in appsettings.json.

Task Objectives

Perform the following actions inside the student_workspace directory: - Configure appsettings.json to enable response compression for HTTPS and set the Gzip compression level to Optimal.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press **Ctrl + S** (Windows) or **Cmd + S** (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	Local VM Environment active and verified	0 Marks
TC2	File appsettings.json exists in workspace	4 Marks
TC3	EnableForHttps parameter is set to true	3 Marks
TC4	Gzip compression level is set to Optimal	3 Marks

Total Score: 10 Marks
