

.NET Lab: ASP.NET Core Health Checks Configuration

Duration : 25 Min.

Scenario

DevOps teams monitor container health using HTTP probe endpoints. You need to configure a custom health check path.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Configure `appsettings.json` to define a health check path configuration matching `/healthz` and set timeout to 5 seconds.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	Local VM Environment active and verified	0 Marks
TC2	File <code>appsettings.json</code> exists in workspace	4 Marks
TC3	Health check path is configured to <code>/healthz</code>	3 Marks
TC4	<code>TimeoutSeconds</code> parameter is set to 5	3 Marks
