

Basic Code Analysis: Categorizing System Incidents

Duration : 30 Min.

Scenario

Your team receives production support tickets. You must classify whether each failure is CODE, CONFIG, INFRA, or INTEGRATION.

Target File Location & Creation

File to Create/Update: student_workspace/solution.json **Input Resource File to Inspect:** student_workspace/production_alerts.log

Task Objectives

Perform the following actions inside the student_workspace directory: - Classify the three given tickets inside 'tickets_classification.json'.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect production_alerts.log inside student_workspace/.
3. Open solution.json in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Test Case	Requirement	Marks
TC1	tickets_classification.json exists and is valid JSON	3 Marks
TC2	Ticket 1 (DB timeout) classified correctly as INFRA/INTEGRATION	4 Marks

TC3	Ticket 2 (invalid DB credentials) classified as CONFIG	3 Marks
-----	---	---------

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
