

# .NET Lab: dotnet-dump Diagnostics

---

Duration : 30 Min.

## Scenario

---

A .NET background worker process freezes in production. You must collect diagnostics to inspect what the threads are waiting on.

## Task Objectives

---

Perform the following actions inside the `student_workspace` directory: - Capture a process memory dump using `dotnet-dump collect`, analyze thread stacks, identify target locked/waiting objects, and save a diagnostics report.

## Instructions to Perform the Task

---

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

## Validation

---

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

## Evaluation Rubric:

---

1. `dotnet-dump collect` command execution logs: 5 marks
2. Process stack thread list analysis and diagnostics report: 5 marks

**Total Score: 10 Marks**

## Important Notes

---

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
