

.NET Lab: NET Crash Dump Automation

Duration : 60 Min.

Scenario

To diagnose intermittent out of memory issues, the operations team requires automatic process dump triggers under memory pressure.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Configure ProcDump or dotnet-monitor triggers to execute process dumps when memory utilization exceeds 85%, and set up archiving paths.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. ProcDump automated trigger scripts configuration: 5 marks
2. Diagnostic rules checking for memory limit thresholds: 5 marks
3. Dump compression and safe storage archive configuration: 5 marks
4. Threshold breach triggers simulation test logs validation: 5 marks

Total Score: 20 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
