

Enterprise Batch Lab: Tracing Scheduler Job Dependencies

Duration : 30 Min.

Scenario

A failed predecessor job has blocked subsequent downstream reports. You need to map parent-child execution paths to identify the blocker.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Build a dependency flow diagram identifying conditional constraints, predecessor nodes, and blocked children.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Mapping upstream and downstream execution dependency chains: 5 marks
2. Identifying the root blocker job in a conditional workflow tree: 5 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
