

Enterprise Batch Lab: Parsing Job Control Language (JCL) Structures

Duration : 30 Min.

Scenario

You are reviewing legacy mainframe processing logs. You need to decode JCL statements to audit the system resources allocated to each step.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Analyze a sample JCL file and document the functions of JOB, EXEC, and DD statements.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the "**Submit Final**" button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Correctly identifying JOB parameters and EXEC step structures: 5 marks
2. Mapping DD statements to physical input/output data sources: 5 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
