

# Enterprise Batch Lab: Diagnosis of Failed Job Exit Codes

---

Duration : 30 Min.

## Scenario

---

A critical batch execution terminates with an exit code of S0C4. You need to diagnose this failure.

## Task Objectives

---

Perform the following actions inside the `student_workspace` directory: - Document the meaning of standard mainframe and system exit codes (e.g., S0C4, U0012, 137) and propose a fix.

## Instructions to Perform the Task

---

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

## Validation

---

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

## Evaluation Rubric:

---

1. Mapping exit codes to specific hardware/software exceptions: 5 marks
2. Drafting standard remediation steps for system-level memory violations: 5 marks

**Total Score: 10 Marks**

## Important Notes

---

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
