

Enterprise Batch Lab: SLA Breach Risk & Incident Reporting

Duration : 30 Min.

Scenario

A delayed batch execution threatens to violate the 6:00 AM reporting SLA window. You must trigger escalation procedures.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Calculate Estimated Time to Recovery (ETR) and document incident communications summarizing business impacts.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Calculating ETR and identifying SLA threshold breach points: 3 marks
2. Drafting incident escalation communications for business stakeholders: 3 marks
3. Proposing SLA breach mitigation steps (e.g. bypassing non-critical jobs): 4 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
