

Enterprise Batch Lab: Azure Data Factory (ADF) Pipeline Debugging

Duration : 45 Min.

Scenario

An ADF ETL pipeline terminates with a network timeout error when connecting to a SQL Database.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Identify failing pipeline activities, analyze input/output JSON Payloads, and propose retry rules.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Locating the failing activity inside ADF execution logs: 3 marks
2. Analyzing JSON activity payload error codes: 3 marks
3. Configuring retry count and retry interval parameters: 2 marks
4. Setting up alert notifications on activity failure states: 2 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
