

Middleware Lab: Linux Log Analysis using Grep & Regex

Duration : 30 Min.

Scenario

An operator needs to inspect Tomcat access logs to identify client IP addresses and count instances of HTTP 500 internal server errors.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Document the precise `grep` command syntax and regular expressions needed to isolate the target logs and output a clean breakdown.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Formulating correct `grep` commands to search for pattern matches: 5 marks
2. Explaining regular expression components used to filter status codes: 5 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
