

Middleware Lab: Port and Process Diagnostics with Netstat & Ps

Duration : 30 Min.

Scenario

A newly deployed web server fails to start because port 80/443 is already bound to another active service process.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Document commands to query active listening sockets, map them to process IDs, and gracefully terminate conflicting processes.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Identifying active processes and filtering list views by name: 5 marks
2. Mapping listening ports to active service process identifiers (PIDs): 5 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
