

Middleware Lab: Modifying Port Listeners & Restarting Services

Duration : 30 Min.

Scenario

Security compliance requires changing the default HTTP port (8080) to a custom port (8443) and validating service operations.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Document modifications to Tomcat's `server.xml` or Nginx's `nginx.conf`, and specify standard script commands to restart the services.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Modifying the XML connector port attributes correctly: 5 marks
2. Using lifecycle scripts (`startup.sh`, `shutdown.sh`) to restart services safely: 5 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
