

Middleware Lab: Configuring Nginx Virtual Hosts

Duration : 30 Min.

Scenario

A single Nginx server instance must host two separate web portals under different server names.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Configure server blocks inside `nginx.conf` to support name-based virtual hosting and custom document roots.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the "**Submit Final**" button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Configuring distinct `server_name` directives and root directory paths: 3 marks
2. Setting custom access log file paths per virtual host: 3 marks
3. Restarting services and validating syntax using configuration test commands: 4 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
