

Log Analysis: Java MDC Context & Distributed Transaction Tracing

Duration : 90 Min.

Scenario

A distributed order checkout flow failed across 4 microservices. Trace the MDC span context to reconstruct the exact failure timeline.

Target File Location & Creation

File to Create/Update: student_workspace/solution.json **Input Resource File to Inspect:** student_workspace/distributed_trace.log

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect distributed_trace.log in student_workspace/. - Edit solution.json and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect distributed_trace.log inside student_workspace/.
3. Open solution.json in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	trace_timeline.json exists and is valid JSON	5 Marks

TC2	Trace ID ('trace-7741') correctly matched across all spans	5 Marks
TC3	Failing downstream span service correctly identified	5 Marks
TC4	Span execution latency correctly calculated	5 Marks

Total Score: 20 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
