

Log Analysis: ISO 8601 & Unix Epoch Timestamp Standardization

Duration : 45 Min.

Scenario

A log aggregator receives timestamps in mixed formats (Unix Epoch, ISO 8601, EST local time). Standardize all timestamps to ISO 8601 UTC format.

Target File Location & Creation

File to Create/Update: `student_workspace/timestamp_converter.js` **Input Resource File to Inspect:** `student_workspace/mixed_timestamps.log`

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Inspect `mixed_timestamps.log` in `student_workspace/`. - Edit `timestamp_converter.js` and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect `mixed_timestamps.log` inside `student_workspace/`.
3. Open `timestamp_converter.js` in `student_workspace/` and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	timestamp_converter.js is syntax-valid JS	3 Marks

TC2	Unix epoch converted to ISO string correctly	3 Marks
TC3	Local timezone offsets adjusted to UTC Z format	2 Marks
TC4	Returns string ending with 'Z' or '+00:00'	2 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
