

Log Analysis: .NET Exception Inner-Exception Chain Triage

Duration : 45 Min.

Scenario

A C# web service threw an `AggregateException` wrapping an `InnerException`. Parse the exception log to extract the innermost target exception details.

Target File Location & Creation

File to Create/Update: `student_workspace/solution.json` **Input Resource File to Inspect:** `student_workspace/dotnet_trace.log`

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Inspect `dotnet_trace.log` in `student_workspace/`. - Edit `solution.json` and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect `dotnet_trace.log` inside `student_workspace/`.
3. Open `solution.json` in `student_workspace/` and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	<code>dotnet_exception_report.json</code> exists	3 Marks
TC2	Inner exception type (<code>SqlException/TimeoutException</code>) identified	3 Marks

TC3	Inner exception message extracted correctly	2 Marks
TC4	Stack trace line number mapped	2 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
