

Log Analysis: Log Rotation Audit & Compressed Log Archival Triage

Duration : 90 Min.

Scenario

An incident occurred yesterday, but active log files were rotated and compressed (syslog.2.gz). Use Linux `zgrep` / `zcat` tools to locate the error trace.

Target File Location & Creation

File to Create/Update: student_workspace/solution.json **Input Resource File to Inspect:** student_workspace/syslog.2

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect syslog.2 in student_workspace/. - Edit solution.json and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect syslog.2 inside student_workspace/.
3. Open solution.json in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	solution.json exists	3 Marks

TC2	Target compressed archive file ('syslog.2.gz') correctly identified	3 Marks
TC3	Timestamp of initial rotated failure extracted	3 Marks
TC4	Error exception class identified	3 Marks
TC5	zgrep filter expression documented	2 Marks
TC6	Log rotation policy type identified (size/daily)	2 Marks
TC7	Impacted service process ID matched	2 Marks
TC8	Root cause summary filled	2 Marks

Total Score: 20 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
