

Log Analysis: Datadog & OpenSearch Log Aggregation Metrics

Duration : 90 Min.

Scenario

Configure OpenSearch aggregation pipelines and Datadog Log Explorer queries to calculate percentile latencies (P95, P99) and monitor service SLA breaches.

Target File Location & Creation

File to Create/Update: student_workspace/solution.json **Input Resource File to Inspect:** student_workspace/mysql_slow.log

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect mysql_slow.log in student_workspace/. - Edit solution.json and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect mysql_slow.log inside student_workspace/.
3. Open solution.json in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	aggregation_metrics.json exists	3 Marks

TC2	OpenSearch percentile aggregation syntax ('percentiles') correct	3 Marks
TC3	P99 latency threshold value correctly calculated	3 Marks
TC4	Datadog log search query syntax valid	3 Marks
TC5	Service SLA breach status identified	2 Marks
TC6	Group-by field ('service') included	2 Marks
TC7	Time interval bucket set to 1m/5m	2 Marks
TC8	Alert trigger condition specified	2 Marks

Total Score: 20 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
