

Basic Code Analysis: Configuring Spring Profiles in YAML format

Duration : 45 Min.

Scenario

A deployment workflow fails to activate the production credentials because of dynamic profile property resolving issues in application.yml.

Task Objectives

Perform the following actions inside the student_workspace directory: - Configure Spring Boot multi-profile configuration settings in 'application.yml'.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press **Ctrl + S** (Windows) or **Cmd + S** (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	application.yml has valid YAML structure	3 Marks
TC2	spring.profiles.active variable configured correctly	3 Marks
TC3	Different properties defined under 'prod' divider blocks	2 Marks

TC4	Correct indentation spacing in configuration nodes	2 Marks
-----	--	---------

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
