

Basic Code Analysis: ASP.NET Core Environment-Specific Configuration

Duration : 45 Min.

Scenario

A .NET Core backend loads development logging levels when deployed to Staging. Configure environment overrides.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Modify 'appsettings.Staging.json' to override logging level config settings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	appsettings.Staging.json has valid JSON	3 Marks
TC2	LogLevel configuration overrides configured	3 Marks
TC3	Default logging level set to Warning	2 Marks
TC4	Microsoft assembly logging set to Error	2 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
