

Log Analysis: .NET Exception Inner-Exception Chain Triage

Duration : 45 Min.

Scenario

A C# web service threw an `AggregateException` wrapping an `InnerException`. Parse the exception log to extract the innermost target exception details.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Fill out 'dotnet_exception_report.json' with inner exception properties.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	dotnet_exception_report.json exists	3 Marks
TC2	Inner exception type (SqlException/TimeoutException) identified	3 Marks
TC3	Inner exception message extracted correctly	2 Marks
TC4	Stack trace line number mapped	2 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
