

Log Analysis: Log Rotation Audit & Compressed Log Archival Triage

Duration : 90 Min.

Scenario

An incident occurred yesterday, but active log files were rotated and compressed (syslog.2.gz). Use Linux `zgrep` / `zcat` tools to locate the error trace.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Document the rotated log archive details inside 'solution.json'.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	solution.json exists	3 Marks
TC2	Target compressed archive file ('syslog.2.gz') correctly identified	3 Marks
TC3	Timestamp of initial rotated failure extracted	3 Marks
TC4	Error exception class identified	3 Marks

TC5	zgrep filter expression documented	2 Marks
TC6	Log rotation policy type identified (size/daily)	2 Marks
TC7	Impacted service process ID matched	2 Marks
TC8	Root cause summary filled	2 Marks

Total Score: 20 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
