

Log Analysis: Integrated Log Investigation Workshop

(End-to-End Incident Triage)

Duration : 90 Min.

Scenario

A major production outage affected the payment gateway. Correlate Linux auth/syslog logs, Java Spring stack traces, Splunk search results, and correlation IDs to perform root cause analysis and generate a structured incident report.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Fill out 'incident_post_mortem.json' in your workspace.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	incident_post_mortem.json exists and is valid JSON	3 Marks
TC2	Root cause correctly identified as database connection pool exhaustion	3 Marks
TC3	Primary correlation ID ('corr-9921') matched across logs	3 Marks

TC4	Failing microservice class and method line number mapped	3 Marks
TC5	Outage duration and impact metrics correctly calculated	2 Marks
TC6	Log evidence snippet included	2 Marks
TC7	Immediate recovery actions documented	2 Marks
TC8	Long-term architectural remediations included	2 Marks

Total Score: 20 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
