

Basic Code Analysis: Java Exception Stack Trace Triage

Duration : 30 Min.

Scenario

A Java application threw a RuntimeException. You are given a stack trace log and must identify the originating line number and specific exception type.

Target File Location & Creation

File to Create/Update: student_workspace/solution.json **Input Resource File to Inspect:** student_workspace/java_stacktrace.log

Task Objectives

Perform the following actions inside the student_workspace directory: - Fill in the exact exception name and line number in your 'solution.json' file.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect java_stacktrace.log inside student_workspace/.
3. Open solution.json in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Test Case	Requirement	Marks
TC1	solution.json exists and is valid JSON	3 Marks
TC2	Exception name matches NullPointerException	4 Marks
TC3	Line number matches exactly line 142	3 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
