

Basic Code Analysis: Express.js Request Lifecycle Tracking

Duration : 30 Min.

Scenario

A request fails to reach a route controller. Analyze the route configuration file and identify which middleware terminates the request prematurely.

Target File Location & Creation

File to Create/Update: student_workspace/solution.json **Input Resource File to Inspect:** student_workspace/express_middleware.js

Task Objectives

Perform the following actions inside the student_workspace directory: - Document the blocking middleware index/name in 'solution.json'.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect express_middleware.js inside student_workspace/.
3. Open solution.json in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Test Case	Requirement	Marks
TC1	solution.json exists	3 Marks
TC2	Correct middleware blocker identified	4 Marks
TC3	HTTP status code returned by the blocker is correct	3 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
