

# Basic Code Analysis: REST API Endpoint Routing & Status Codes

Duration : 30 Min.

## Scenario

An API route returns HTTP 200 OK for invalid resource creation requests instead of HTTP 400 Bad Request. Create 'server.js' in student\_workspace/ with proper status codes.

## Target File Location & Creation

File to Create/Update: student\_workspace/server.js

## Task Objectives

Perform the following actions inside the student\_workspace directory: - Create 'server.js' inside 'student\_workspace/' and configure Express routes to return status 400 for invalid inputs and status 201 for creation.

## Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect the scenario input files in student\_workspace/.
3. Create/update the file student\_workspace/server.js and populate it with valid parameters and configurations.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your work by running python run.py in the terminal before submitting.

## Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

## Grading Criteria

Your performance will be evaluated based on the following test cases:

| Test Case | Requirement                                               | Marks   |
|-----------|-----------------------------------------------------------|---------|
| TC1       | server.js exists in student_workspace/ with valid JS code | 3 Marks |

|     |                                                    |         |
|-----|----------------------------------------------------|---------|
| TC2 | HTTP status 400 set for missing payload validation | 4 Marks |
| TC3 | HTTP status 201 set for successful creation        | 3 Marks |

Total Score: 10 Marks

### Important Notes

---

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
