

Basic Code Analysis: Environment Variable & Secrets Injection Audit

Duration : 30 Min.

Scenario

Hardcoded database credentials ('DB_PASSWORD=secret123') were found in source code. Create 'config.js' in student_workspace/ reading credentials from environment variables.

Target File Location & Creation

File to Create/Update: student_workspace/config.js

Task Objectives

Perform the following actions inside the student_workspace directory: - Create 'config.js' inside 'student_workspace/'. Replace hardcoded password strings with 'process.env.DB_PASSWORD'.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect the scenario input files in student_workspace/.
3. Create/update the file student_workspace/config.js and populate it with valid parameters and configurations.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your work by running python run.py in the terminal before submitting.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	config.js exists in student_workspace/ with valid JS code	3 Marks
TC2	Hardcoded secret string removed	4 Marks

TC3	process.env.DB_PASSWORD environment variable referenced	3 Marks
-----	--	---------

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
