

Basic Code Analysis: Advanced Incident RCA Audit Logging

Duration : 90 Min.

Scenario

Analyze a multi-system failure involving a network gateway timeout and a database deadlock, classify the issues, and generate a structured post-mortem log.

Task Objectives

Perform the following actions inside the `student_workspace` directory:

- Fill out 'rca_audit_log.json' detailing the incident correlation timeline and classification category.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate

your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	rca_audit_log.json exists and is valid JSON	3 Marks
TC2	Primary classification mapped to INTEGRATION/INFRA	3 Marks
TC3	Deadlock trigger transaction correctly identified	3 Marks
TC4	Gateway timeout duration correctly calculated	3 Marks
TC5	Correlation ID matched	2 Marks
TC6	Post-mortem timeline entries are sequential	2 Marks
TC7	Mitigation steps are documented	2 Marks
TC8	Severity level correctly identified	2 Marks

Total Score: 20 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
