

Observability Lab: MELT Telemetry Data Triage & Framework Analysis

Duration : 30 Min.

Scenario

During a production checkout outage, monitoring systems trigger multiple alerts. You must analyze whether metrics, logs, or traces provide the fastest root cause identification.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Classify telemetry signals under the MELT framework (Metrics, Events, Logs, Traces) and document an incident triage strategy in your workspace.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Classifying telemetry data types across Metrics, Events, Logs, and Traces (MELT): 5 marks
2. Defining telemetry source selection criteria for rapid incident triage: 5 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
