

Observability Lab: Golden Signals & USE Methodology

Bottleneck Analysis

Duration : 30 Min.

Scenario

A REST API backend is experiencing severe response degradation. You must apply Four Golden Signals and USE methodology to isolate system bottlenecks.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Analyze latency, traffic, error rates, and saturation metrics to diagnose infrastructure performance bottlenecks.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Analyzing Latency, Traffic, Errors, and Saturation across REST API endpoints: 5 marks
2. Applying the USE (Utilization, Saturation, Errors) methodology to isolate infrastructure bottlenecks: 5 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
