

Observability Lab: Datadog APM & Service Map Flow Investigation

Duration : 30 Min.

Scenario

A payment processing API shows elevated error rates in Datadog. You must investigate the request flow using APM and Service Maps.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Trace request execution flows through Datadog Service Maps and inspect APM flame graphs to pinpoint failing database queries.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Investigating service dependencies and error propagation using Datadog Service Maps: 5 marks
2. Analyzing APM traces and flame graphs to isolate slow backend queries: 5 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
