

Observability Lab: Splunk Search & New Relic APM Performance Auditing

Duration : 30 Min.

Scenario

Engineers need to audit web application performance across Splunk log indexes and New Relic browser monitoring dashboards.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Execute basic Splunk log searches and analyze New Relic transaction traces to evaluate end-user page load times.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the "**Submit Final**" button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Executing basic Splunk index searches to filter application log events: 4 marks
2. Navigating New Relic APM transaction traces to evaluate backend latency: 3 marks
3. Correlating browser performance metrics with server-side response times: 3 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
