

Observability Lab: Dynatrace Grail & DQL Event Querying

Duration : 30 Min.

Scenario

An SRE team requires querying log events stored in Dynatrace Grail to detect application crash patterns.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Write Dynatrace Query Language (DQL) statements to fetch, filter, summarize, and group log and metric records.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the "**Submit Final**" button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Formulating DQL queries using fetch, filter, and summarize directives: 4 marks
2. Sorting and grouping system log events by severity and host attributes: 3 marks
3. Extracting application error counts across time windows in Dynatrace Grail: 3 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
