

Observability Lab: New Relic NRQL Querying for Slow Transactions

Duration : 30 Min.

Scenario

An application performance manager needs a weekly report highlighting the top 10 slowest database transactions.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Write NRQL queries using `SELECT`, `WHERE`, `FACET`, and `TIMESERIES` statements to extract transaction performance data.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Constructing NRQL queries with `SELECT`, `WHERE`, and `FACET` clauses: 4 marks
2. Aggregating transaction duration percentiles over specific time windows: 3 marks
3. Building time-series charts displaying error rate trends in New Relic: 3 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
