

Observability Lab: Grafana Dashboard & Kibana Discover Log Exploration

Duration : 45 Min.

Scenario

Operations teams use Grafana for metrics and Kibana for log discovery. You need to navigate both tools to investigate a service spike.

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Modify Grafana dashboard panels, query Elastic/Kibana Discover logs, and correlate AWS CloudWatch metrics.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Navigate to and click the specific files mentioned in the Task Objectives.
3. Make the necessary code edits in the editor.
4. Press `Ctrl + S` (Windows) or `Cmd + S` (Mac) to save your changes.
5. If you need to run commands, open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.

Validation

Once you have saved your files and are ready to submit, return to the platform dashboard and click the **"Submit Final"** button. This task is evaluated manually by the grading team.

Evaluation Rubric:

1. Modifying Grafana time-series dashboard panels to display metric trends: 3 marks
2. Searching and filtering unstructured application logs in Kibana Discover: 3 marks
3. Navigating AWS CloudWatch metrics and X-Ray trace insights: 2 marks
4. Correlating Kibana log patterns with Grafana latency metrics: 2 marks

Total Score: 10 Marks

Important Notes

- This is a manually evaluated question.
- Ensure all logs and configurations are fully saved in your workspace folder before submitting.
