

Databricks Lab : Delta Table Operations

Duration : 60 Min.

Scenario

You need to demonstrate primary DML operations on Delta tables, including updating records and verifying table history details.

Input Details

The environment has been pre-configured with the following resources: - **Workspace:** Pre-configured through KodeBuck Service credentials (DATABRICKS_HOST, DATABRICKS_TOKEN)

Username & Naming Conventions

Your candidate prefix is a combination of your username (the part of your email/login before the @ or _ symbol) and exam code. For example, if your username is student (or student_labskraft.com) and your exam code is exam123, your prefix is **student-exam123**.

You must name your resources accordingly:

- Delta Table Name:** <prefix>_delta_update (e.g. student_exam123_delta_update)

Task Objectives

1. Create and Update Delta Table

- Create a Delta table named <prefix>_delta_update.
- Run updates on the table and verify history version logging.

Verification

Once you have performed the tasks, you can run the verification script to check your progress and receive your score. The verification system will check the actual resources in the environment.

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	Delta table existence (<prefix>_delta_update exists)	4 Marks

TC2	Row update validation	4 Marks
TC3	History version check	4 Marks
TC4	Reserved validation	4 Marks
TC5	Reserved validation	4 Marks

Total Score: 20 Marks

Important Notes

- Ensure all resource names contain your candidate username prefix in lowercase.
- Check that your script compiles cleanly and contains no syntax errors.
