

GenAI Ops: Production Operational Verification & Safe Execution

Duration : 30 Min.

Scenario

Before running AI-suggested commands in production, perform safety verification. Categorize commands into SAFE, NEEDS_REVIEW, or NEVER_RUN.

Target File Location & Creation

File to Create/Update: `student_workspace/solution.json` **Input Resource File to Inspect:** `student_workspace/prod_commands_list.txt`

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Inspect `prod_commands_list.txt` in `student_workspace/`. - Create or update `student_workspace/solution.json` and populate it with valid analysis results.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect `prod_commands_list.txt` inside `student_workspace/`.
3. Create or open `student_workspace/solution.json` in `student_workspace/` and record your answers.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	solution.json exists	3 Marks
TC2	'rm -rf /' marked as NEVER_RUN	4 Marks
TC3	'kubectl get pods' marked as SAFE	3 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
